

# SliderMouse Pro

## **A fresh take on a proven ergonomic design**

Meet the SliderMouse Pro. Like our other centered mouse designs, SliderMouse Pro reduces reaching, twisting, and straining, ensuring you work in a comfortable and ergonomic posture. The SliderMouse Pro introduces a new way to control the cursor, keeping your body centered and your hands in a relaxed position while using the mouse and keyboard. The interchangeable magnetic palm supports come in a variety of colors, materials, and sizes allowing you to easily customize your RollerMouse to you style and needs.

SliderMouse Pro is designed and developed in Scandinavia in collaboration with ergonomic experts. It is a product inspired by the Nordics, which you can see in the minimalistic approach that unites functionality with the aesthetic.

### Take care of your body

With the SliderMouse Pro, your arms are in a neutral posture, in front of your body. This removes tension on shoulders, arms, and elbows, giving you a more comfortable and ergonomic working position. It allows for variation, as you can use your right and left hand for cursor navigation while controlling the clickable Sliderbar with a slight touch of the fingertips. Simply put, you have all functions within reach.

### Customize to your needs

You can customize the SliderMouse Pro to your individual preferences with the unique magnetic wrist rests, allowing you to quickly switch between various models without using any tools. Our wide selection of wrist rests is designed to support your physical needs and stylistic desires. Change click sounds, cursor speed, and click resistance with ease - you know what suits you best.

### Plug & play

Connect the SliderMouse Pro to your PC or Mac via Bluetooth, the USB receiver or cable, depending on your preferred method. Suitable for any keyboard size. Control multiple screens and customize the programmable buttons to your favorite shortcut functions.
