

# Armrest Dynamic

The Armrest Dynamic is a perfect solution to support the forearm to reduce tensions in the arm, shoulder, and neck. Its fully flexible joints allow it to move smoothly with your motions as you work. Can be used as it is for one arm or as a pair to support both arms.

## Benefits of Armrest Dynamic

In offices, productions lines, and industrial environments it is common with static movements and positions, which often leads to tension and pain in the arm, shoulder and neck. By using the Armrest Dynamic you support the forearm and elbow, reducing tensions and avoiding unnecessary pain.

The forearm rests on a soft support made from artificial leather that can rotate 360°. The two joints in Dynamics aluminium arm allows it to follow all your movements, providing support regardless of the position or motion of your arm. It attaches easily to desktops using a clamp and can be adjusted with six different height levels depending on your preferred position.

It is suitable for tabletops that's 15–40 mm thick, and do not work with desks that have rounded edges, raised decorative trims, or fragile materials such as glass.

## Facts

- » Length: 180–365 mm
- » Width: Dynamic
- » Height: 120–180 mm
- » Height above table: 30–90 mm
- » Tabletop thickness: 15–40 mm
- » Weight: 665 g
- » Product code: TB220
