

# Raised Mouse Mat Uplift

---

The Uplift Raised Mouse Pad was designed to level up the height difference that may occur when combining and using a mouse and forearm support. This happens in particular when the thickness of the forearm supports places the users' hands at a higher level than the surface of the desk and computer tools such as the mouse. In order to compensate this difference in level, the Uplift mouse pad tries to fill this difference in height by placing the mouse at the same level as the forearm support for better posture and use.

Available in two sizes, 11mm and 20mm.

**Technical specification:**

- Dimensions 18 x 22 cm
- Bottom non-slip material
